Wrap-Around Tool Repairs Damaged Threads on Bolts and Studs

Emhart® Teknologies Introduces Combination Kit for Metric and SAE threads

NEW HAVEN, Conn. (June 22, 2005) -- Emhart® Teknologies, New Haven, Conn., has introduced the latest generation of Wrap-Around Thread Chasing tools. Enabling quick, on-site thread repair, the Chase 'em Back™ kit offers 21 wrap-around thread chasing tools.

A standard Chase 'em Back™ kit contains 11 metric wrap-around thread tools measuring from 6 to 12 mm, 10 SAE tools measuring from ¼ to ½ inch, a deep-well stainless steel socket and a stainless steel T-handle for working the tools. A handy placard illustrates tool placement within the kit and provides useful guidelines for safe and effective use.

Each wrap-around thread reformer consists of two identical halves fastened with a stainless steel pin. Tools are finished with a six-step treatment process to minimize thread chipping on the job. Each tool also features clearly marked, laser-inscribed size identification for accurate tool selection and placement.

Because these thread reformers have no lead-in threads, they can be used in any direction, up or down, to repair damaged stud or bolt threads. Users wrap the tool around a portion of undamaged existing thread for use as a template, and then work it back and forth over the damaged area to restore the thread to full effectiveness.

Chase 'em Back™ is one of four kits for thread restoration Emhart supplies for the Automotive Aftermarket segment. To see the complete range of branded products sold to the Aftermarket, please visit the Emhart Innovation Center at www.emhart.com to view the Aftermarket Brochure (AM802). The other Emhart brands include POP® and Drill-Out®.

About Emhart Teknologies

New Haven, Conn.-based Emhart Teknologies is the global leader in the design and creation of unique assembly technologies from concept through installation. Emhart's technology-based assembly products and systems deliver innovative, integrated system solutions to virtually any manufacturing challenge anywhere in the world. From automotive to construction, computers to appliances, Emhart products are sold in more than 100 countries. A Black & Decker Company, Emhart has 3,000 employees in 24 operating facilities worldwide. See www.emhart.com for more information.
